DETAILED ACTION

Status of the Application

Receipt is acknowledged of the Request for Continued Examination (RCE) under 37 C.F.R. 1.114, the Amendment, Applicant's Arguments/Remarks and the Declaration under 37 C.F.R. 1.132, all filed 06/23/10.

Claims 1-3, 5, 6, 8-16 and 18 are pending in this action.

Claims 1, 5, 9 and 18 have been amended.

Claims 4, 7 and 17 have been cancelled.

Claims 1-3, 5, 6, 8-16 and 18 are allowed.

* * * * *

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 23 June 2010 has been entered.

Allowable Subject Matter

Claims 1-3, 5, 6, 8-16 and 18 are allowed.

The following is an examiner's statement of reasons for allowance: The primary reasons for allowance are that the prior art of record (Jose *et al.* – USPN 6,620,417; Tanner *et al.* – USPN 5,935,556 and Plücker *et al.* – USPN 7,264,795) does not disclose nor teach a sprayable

cosmetic composition comprising the particular components and features as presently claimed herein. Namely, the prior art does not disclose or teach a cosmetic composition that is sprayable and that includes a rheology control agent comprised of coprocessed microcrystalline cellulose and carboxymethylcellulose. The art further does not teach the instant rheology control agent comprised of coprocessed microcrystalline cellulose and carboxymethylcellulose in the amount/range claimed (of about 0.2 wt% to about 4 wt%).

In contrast, Jose discloses microcrystalline cellulose as particulate material, but does not disclose use of a rheology control agent in a sprayable composition comprising microcrystalline cellulose coprocessed with carboxymethylcellulose. Moreover, there is no teaching or suggestion that Jose's composition would be useful as a sprayable composition.

Tanner is directed to sunscreen compositions and does not disclose use of microcrystalline cellulose, nor do they teach a rheology control agent provided in a sprayable composition comprised of microcrystalline cellulose coprocessed with carboxymethylcellulose.

Plücker is also directed to sunscreen compositions and provides for microcrystalline cellulose as a carrier. However, Plücker does not teach or suggest a rheology control agent provided in a sprayable composition comprised of microcrystalline cellulose coprocessed with carboxymethylcellulose.

In the Declaration under 37 C.F.R. 1.132 (filed 06/23/10), Applicants demonstrated a showing of unexpected results of better stability and functionality based on the use of a rheology control agent that is comprised of microcrystalline cellulose coprocessed with carboxymethylcellulose. A composition formulated with the instant rheology control agent exhibited spray characteristics of the coprocessed products which were finer, less coalesced and

did not drip as compared to the comparative samples using the MCC and CMC in a dry mixture. Thus, the instant composition which employed a rheology control agent comprised of microcrystalline cellulose coprocessed with carboxymethylcellulose offered unexpectedly better stability and functionality in a non-aerosol spray as compared to the comparative samples. Hence, the instant invention is rendered non-obvious and patentable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
